

Seamless Integration and Security for Mobile Credentials and Services

Enable seamless integration, metadata access, and access control for enhanced mobile identity solutions with the Scytáles Service Manager

Scytáles Service Manager Features and Capabilities

Signing Service & Key Management

The Scytáles Service Manager signs mDLs, mIDs, Derived mIDs and Digital Identity Wallets on behalf of the Issuer to relay them to end-user devices.

Easy and Secure Integration

The Service Manager has secure API Connections that keep data up-to-date, if desired, to/from the System of Record, a civil register from issuing authorities or Trusted Identity Providers/CSP (Level 3 Assurance).

High Availability for Mobile Identity Documents Issuance

The Service Manager can issue all digital identity documents on user mobile devices. It is designed for high availability to meet all of your needs.

Complete Supply Chain with High-Level Security Mechanisms

The Scytáles Service Manager secures the complete supply chain with the highest level of onboarding and facilitates different reading mechanisms, including OpenID Connect (Web-PC, Local PC and Peer-to-Peer) in real-time in online and offline modes.

Identity & Access Management

The Service Manager also provides registration and authentication features for Validators who need access to online services.

Empowering Secure Communication and Access Control

The Scytáles Service Manager provides the primary interface, allowing the Scytáles Mobile Validator access to metadata associated with the Scytáles Mobile Driving Licence, Mobile ID, Derived Mobile ID and Digital Identity Wallet. The Service Manager is also responsible for access control, ensuring only authorised personnel are permitted access. The Service Manager can be integrated with a standalone PKI Solution or a Trusted Service Provider/Credential Service Provider (CSP).

How can the Scytáles Service Manager be delivered?

When it comes to delivering a versatile and powerful Service Manager, flexibility is critical. We understand that different organizations have varying requirements and approaches to implementing such solutions. That's why we offer multiple delivery options to cater to your unique needs.

Stand-Alone Project Development

If you're starting from scratch or need a dedicated Service Manager solution, our team can develop a whole new project specifically tailored to your objectives. This approach offers a clean slate for creating a customised solution that aligns perfectly with your requirements and branding.

Integration with Existing Solutions

We recognise the importance of seamless integration with your current systems. Whether it's an existing solution or a broader identity management platform, our Service Manager can be integrated as a complementary component. This ensures you can enhance your current offerings without needing a complete overhaul.

Modular Development with SDKs

Sometimes, you may prefer a modular approach, selecting specific features or functionalities from our Service Manager using Software Development Kits (SDKs). This option allows you to integrate only the most relevant elements to your needs. It's a practical way to maintain flexibility and scalability while optimizing resources.

No matter which delivery option you choose, the Scytáles Service Manager is designed to meet the highest industry standards for security, usability, and performance. We're committed to providing you with a solution that not only fits your immediate requirements but also scales with your organization's growth. Plus, with our team of experts and comprehensive support, you'll have the guidance you need throughout the entire process.

Discover how our Service Manager can transform your digital identity management strategy by getting in touch with our team to help you select the delivery method that aligns best with your goals and infrastructure.
